'LYTIC CAPACITORS

Powerlytics®

High capacitance, high ripple current rating, excellent operating life. Capacitance range: 50 μF to 650,000 μF. Voltage range, 3 to 100 v. Operation to 85°C without derating.

Twist-Lok® Electrolytics

Hermetically sealed in aluminum cases. Withstand high temperatures (85° C), high surge voltages, high ripple currents.

Atom® Electrolytics

Tiny, dependable single or multiple section units. Low leakage, long shelf life. Metal cases.

Littl-Lytic® Electrolytics

Ultra-small, excellent for transistorized circuitry. All-welded construction—no pressure joints to cause "opens". Long shelf life.

HYPASS® CAPACITORS

Exclusive 3-terminal feed-thru units which effectively by-pass vhf currents. Suppress TVI from transmitters, diathermy, line-conducted radiation, etc.

ECONOLINE® TRANSISTORS

Molded Plastic Silicon Planar Transistors

High performance standards at very moderate cost. Proven semiconductor devices that facilitate low cost circuit designs for your equipment. For applications such as FM and AM receivers (both home and auto), intercom systems, mobile radio transmitters, electronic organs, instrument preamplifiers and amplifiers.

Light Emitting Diodes*

Premium-quality, priced for the hobbyist/experimenter. Fantastically long-life, solid-state devices. Visible lights, infra-red lamps, photo-sensors, alpha-numeric read-outs that open up a new world of experimentation.

* Another exciting product from Monsanto

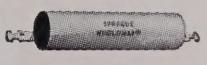
DIFILM® CAPACITORS

Orange Drop® Dipped Tubulars

Dual dielectric (polyester film and paper), with solid impregnant. Double-dipped in epoxy resin. Radial leads, ideal for printed wiring boards.

CERAMIC CAPACITORS

Cera-Mite® Disc Types



Extremely wide range of capacitance values and voltage ratings. Available in general application, high-K, temperature-stable, and temperature-compensating types.

Buttonhead Types

Flat disc capacitor element sealed in top of hex head. Screw stud for easy mounting. Low self-inductance, high self-resonant frequency. Ideal for by-pass or feed-thru applications.

WIREWOUND RESISTORS

Koolohm® Resistors

Insulated shell power resistors wound with ceramic-insulated wire. Completely moisture-proof. Ratings to 120 watts in inductive and non-inductive types.

Blue Jacket® Resistors

Vitreous enamel coating guards against humidity and failure from electrolysis. Ratings from 2 to 10 watts.

NEW CT-1

From LEL

Will allow you to Dynamically test all types of capacitors.

The Model CT-1 features a built-in electronic power supply providing BOTH AC and DC Test Voltages in a special circuit with highly sensitive NEON type leakage indicator. The CT-1 permits quick, accurate testing of condensers for leakage or shorts with actual DC voltage applied and readily indicates intermittent OPEN condensers with AC applied. Self-regulating power supply circuit provides tapered forming current to suit particular requirements of capacitor under test. Special circuit re-forms and polarizes electrolytic and tantalytic capacitors under test. High sensitivity permits determination of condenser dielectric breakdown before leakage causes major shut-down.

Notes on the Use of QN Signals

1. The QN signals listed above are special ARRL signals for use in amateur c.w.nets only. Other meanings that may be used in other services do not apply.

2. Some QN signals are for use by net control stations only; these are marked with an asterisk (*). Others have slightly different meanings when used by the NCS and net stations; in this case, the meaning when used by the NCS is marked with an asterisk (*

3. Some QN signals have two meanings, the difference depending on how or by whom used. Examples: (a) QNC, when used as a preface to transmission of a message, carries its first meaning; when used by a station reporting into the net (e.g.,W9NCS DE W9NET QNI QNC), it carries its second meaning. (b) QNI, when used by the NCS, is a request for stations to report in; when used by a net station, it means that this station is reporting in. (c) QNJ, when used alone, carries its first meaning; when followed by a call, it carries the second meaning.

4. QN signals are never followed by a question mark, even though the meaning may be interrogatory.

5. Do not use QN signals on phone nets. Say it with words.

6. Use QN signals in nets only. They are not for use in casual amateur conversation.

7. Make frequent use of standard international "Q" signals in traffic nets, for meanings not covered by QN signals. Examples: QRU, QRV, QSV, QTA, QTB, QTX, etc.

ON GOOD PHONE OPERATING

1. *Listen much . . . with care.* Avoid distractions in your operating room. Tune the band well after each call.
2. *Time your calls; monitor your own frequency.* Call only when a station is free.
3. *Make short calls, with breaks to listen.* Speak clearly, at a steady, modest rate. Three short calls are better than one long one.
4. *Use push-to-talk technique . . . speak near the mike.* Watch the modulation indicator. Keep local background noise at a minimum.
5. *Make notes. Avoid missing points for comment.* Jot down topics to avoid repeats.
6. *Talk in connected thoughts and phrases.* Notes will help avoid mixing up subjects. Push-to-talk technique will keep brother amateurs from calling you a monologuist.
7. *Speak naturally.* QSOs need not be cut and dried. Make them interesting. Avoid exhibitionism. Use proper operating form to promote efficiency in communication and add respect and prestige for your station.

Use of this standard list is recommended by ARRL. Haphazard selection of words often results in confusion. A degree of uniformity in use of phonetic words reflects favorably on your individual operating, and on the whole amateur service.

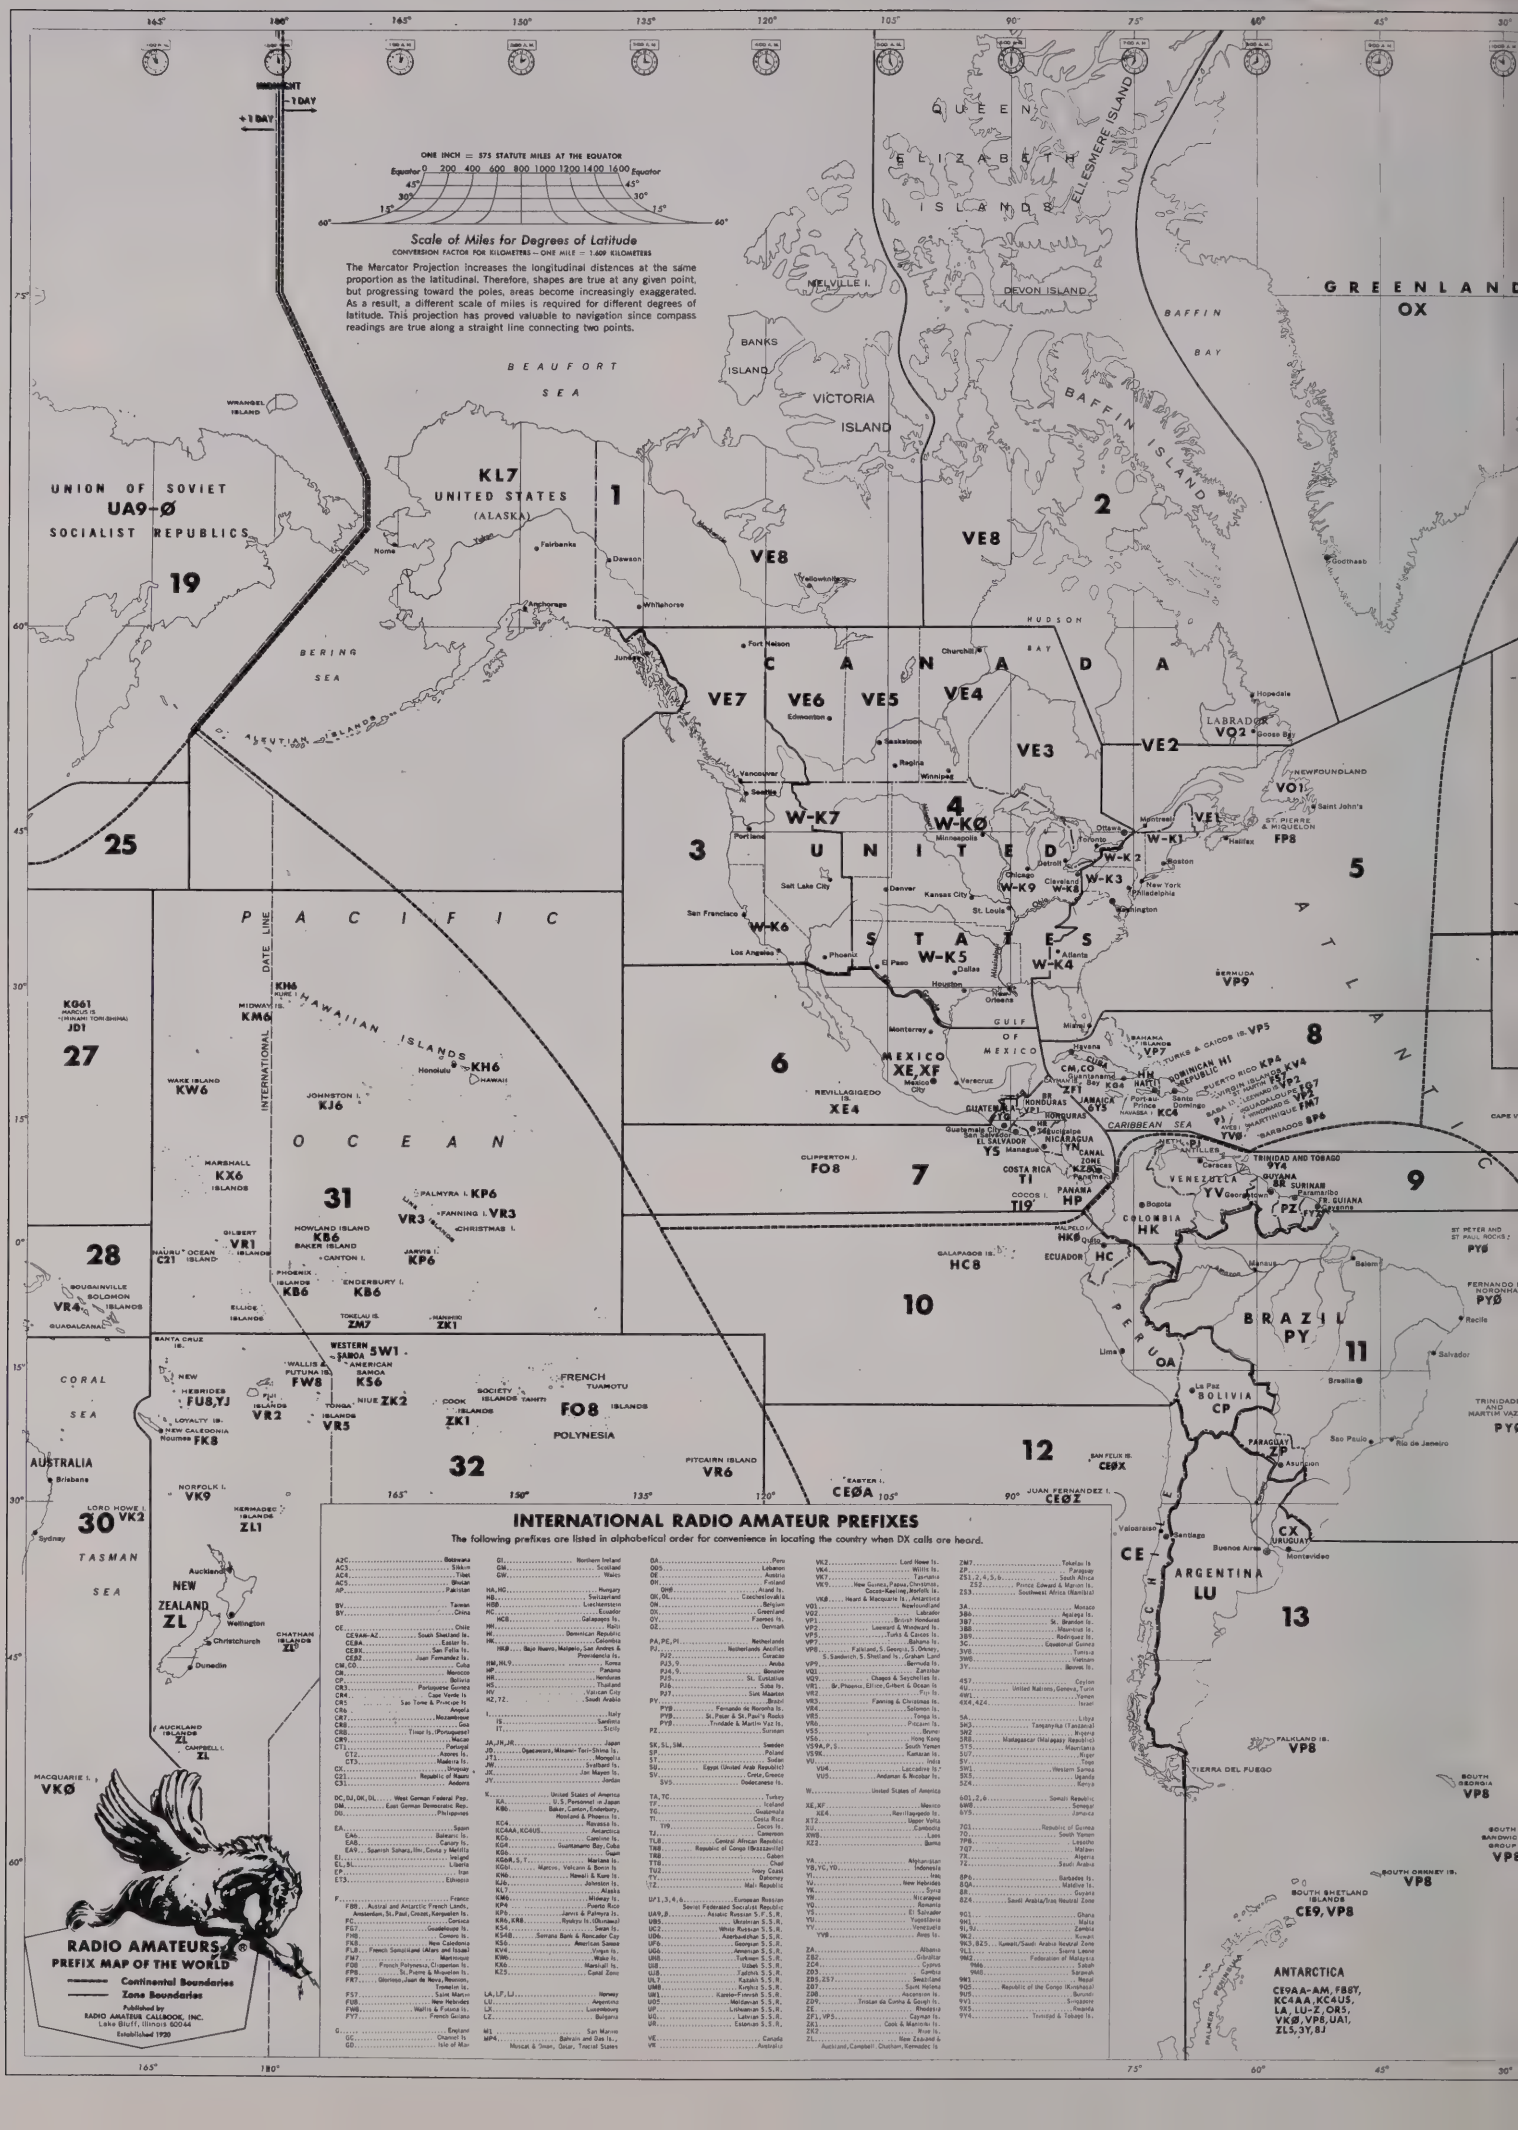
STANDARD TIME THROUGHOUT THE WORLD

The standard time system is based on the theoretical division of the surface of the globe into 24 zones, each of 15° of longitude. The initial zone is the one which has as its central meridian the Greenwich Meridian and with the meridians 7° 30' E. and 7° 30' W. as its eastern and western limits. Time in this zone is called Greenwich Mean Time, or GMT. Places to the east of Greenwich have faster time than Greenwich, while places to the west have slower time. Not all countries follow the International Time Zone System, but some use the time of some principal city as a standard and others have no standard time.

Reference - "Standard Time Chart of the World" No. 5192, published by U. S. Navy Hydrographic Office, Washington, D.C.

The theoretical system described is applied, in a strict sense, only in oceanic regions. On land or on groups of islands the system is applied with certain local deviations, which, are rendered necessary by frontiers, convenience of an entire island group to maintain same zone time, etc. The time used in each country, whether it is the time of the corresponding zone or modified for reasons given, is an hour fixed by law and, for this reason, is called legal time, or more generally standard time.



Another deviation from this theoretical system is that certain countries, for economic reasons, modify their legal time for part of the year, especially in summer, by advancing it an hour or another fraction of time. Where such deviations are maintained on a year-round basis, the time kept is considered to be standard time.

The above table shows the great circle bearing in degrees, of various metropolitan areas in the United States in relationship to each other. This table should be used from left to right only. To find the great circle bearing between any two of the cities shown, start at the left and follow the horizontal line to the right until you come to the column directly under the name of the city that you desire to beam a radio signal to. For all practical purposes in the United States, Polaris (the North Star), is due north. To find this star, to calibrate a directional radio beam, look for the first star on a straight line with the two outer stars on the outside edge of the cup of the big dipper. This table was compiled from information furnished by the U. S. Coast and Geodetic Survey.

With this chart you can convert standard time in any time zone to GMT or tell what time it is in other parts of the world. To correctly use this chart visualize each horizontal line as a complete circle. From your time zone tracing horizontally to the right (Counter Clockwise) it will be tomorrow when you pass midnight and yesterday when you pass the international date line. To the left (Clockwise) it will be yesterday when you pass midnight and tomorrow when you pass the international date line. There is no change in date when you pass both midnight and the international date line going in one direction. For instance at 8 PM in New York Eastern Standard Time it is 2 AM tomorrow in Berlin, Germany and 11 AM tomorrow in Sydney, Australia. Always trace in the shortest direction from your time zone to find what time it is in any other zone.

I am Pegasus . . . . according to legend, winged and with blazing hoofs, mane flying, crossed the heavens with such speed I caused the crash of lightning and the roar of thunder.

Of course, this is a myth, but what an exciting thought—to race across the heavens with the speed legend gave me. Naturally it's really impossible for me to have accomplished such a feat but not for you . . . a radio amateur.

You can reach the corners of the world . . . with a turn of a knob you can cross the heavens—the whole world is yours . . . adventure is yours.

We have much in common—my legend of adventure—your history of adventure, as part of amateur radio.

We join our past, present and future here, in this emblem.

A brand new, modern design, emblem for radio amateurs to display their own call letters. A truly beautiful emblem you will be proud to wear.

Each piece will be engraved with your call letters—to make it your very own. The quality and workmanship is guaranteed.

Make your selection now—and wear your emblem proudly—you've earned it.
